Compliance with a Target Off Blocks Time (TOBT) is required. All flights departing Brisbane Airport are required to submit a TOBT through a local Designated Ground Handling Agent (DGHA) or local Fixed Based Operator (FBO). For further enquiries email: acdm@bne.com.au or PH H24 07 3406 3171.

5.4. **Flow Tactical Landing Slots**

Flights inbound to Brisbane with a duration of less than 45MIN must:

a. Validate their COBT with Brisbane Flow on 07 3866 3588 during HR of GDP; or
b. Confirm a tactical landing slot with Brisbane Flow on 07 3866 3588 outside periods of GDP. Failure to do so will result in delays.

Flights departing YBAF, YBCG and YBSU for a landing at YBBN must CTC Brisbane Flow Controller on 07 3866 3588 prior to engine start.

For full information regarding the Ground Delay Program see *AIP ENR 1.9*.

5.5. **Start and Pushback Procedures**

a. Departing aircraft with ground power must CTC Delivery ready for pushback or start. Aircraft will be instructed to stand-by for Ground once compliant with any applicable ATFM procedures. Ground will approve pushback or start clearance when able.
b. Departing aircraft without ground power are approved to start at own discretion, advising Delivery when start complete. Aircraft for pushback will be instructed to stand-by for Ground once compliant with any applicable ATFM procedures. Aircraft for taxi from bay will be instructed to CTC Ground for taxi clearance once compliant with any applicable ATFM procedures. Ground will approve pushback or taxi when able.

6. INDEPENDENT PARALLEL APPROACH OPERATIONS

6.1. Refer to DAP EAST Brisbane Independent Parallel Approach User Instructions.

7. ARRIVAL PROCEDURES

By day, ATC may use 2,400M RWY separation between ACFT arriving to RWY 01R/19L and RWY 01L/19R. Both ACFT may occupy the RWY during application of the standard.

8. DEPARTURES

8.1. Departures shall normally be cleared in the order in which they are ready for takeoff, except that deviations may be made from this order to facilitate the maximum number of departures with the least average delay.

9. PARALLEL OPERATIONS RUNWAY ASSIGNMENT

Unless instructed by ATC or operationally required, ACFT shall be issued the following runways:

9.1. Departures

a. RWY 01L/19R for all jet ACFT routes north, and
b. RWY 01R/19R for all jet ACFT routes west, and
c. RWY 01R/19L for all jet ACFT routes to south and east.

9.2. Arrivals

a. RWY 01L/19R for all aircraft from routes north and west, and
b. RWY 01R/19L for all aircraft from routes south and east.

9.3. Aircraft arriving via ENLIP

a. RWY 01L/19L for all aircraft arriving via ENLIP STAR

Note 1: ACFT which operationally require a different runway from that assigned, must advise ATC at clearance delivery stage.

Note 2: RWY assignment is subject to Noise Abatement Procedures.

10. LOW VISIBILITY

10.1. Operations

a. For CASA approved operators, RWY 01R/19L and 01L/19R are capable of supporting take-offs with an RVR of not less than 125M.
b. TWY LGT spacing supports use in visibility not less than:
   (i) 550M RVR for TWY C12, C13, F1, J and L.
   (ii) 300M RVR for all other TWY.
c. Refer to *AIP DAP* for Aerodrome Ground Movement Charts.

10.2. Procedures

a. LVP require restrictive measures during specific weather conditions. LVP protects the ILS sensitive and critical areas and ensures safe ground movements and the safety of ACFT conducting low VIS OPS.
b. Preparations for the activation of LVP are commenced when visibility has reduced to 1,500M. This ensures that the LVP are in forced when:
   (i) the cloud ceiling is 210FT or less; or
   (ii) the RVR is at or below 550M or the Runway Visibility (RV) is 800M or less when RVR is not available.
c. Intersection departures are not permitted. All aircraft will be directed to the full length of a runway for departure.
d. Any pilot unsure of their position whilst operating on the Manoeuvring Area must Hold Position (STOP) and immediately advise ATC.
e. Radio failure – Aircraft must hold position and await further guidance from a 'follow me' vehicle.
f. Instrument RVR is provided at touchdown zone, midpoint zone and end zone for each RWY.
g. In the event of failure of RVR, manual RWY visibility assessments will be provided.
h. ATC use an Advanced Surface Movement Guidance Control System (ASMGCS) to monitor ACFT and vehicles on the Manoeuvring Area.
i. If ASMGCS is unserviceable during LVP, ATC will restrict aircraft and vehicle access to the Manoeuvring Area.
j. Aircraft are limited to one movement at a time on any portion of the Manoeuvring Area unless stop bars are operational.

11. All TWY are suitable for use in conditions of greater than RVR 550M

NOISE ABATEMENT PROCEDURES

Refer AIP DAP.
